ARRIC LUCAS

5992 Astra Avenue, St. Louis, MO 63147

Dear Hiring Manager,

I am applying for the summer camp counselor position at ID Tech, which was recommended to me from a friend. ID Tech's goal of teaching various technology skills to a diverse group of kids and teens has inspired me to pursue this position. As a freshman at Washington University in St. Louis Studying Computer Science and Finance, I understand the importance of learning technical skills as early as possible. Being a Computer Science major, I am able to assist the students participating in the camp with learning how to code along with other technological skills. I have strong problem solving, communication, and adaptability skills. All of which are useful in helping students learn new technological skills.

An effective camp counselor needs to be experienced with the material that the campers are learning as well as having the ability to relate and assist them with any issues that arise. This past semester, as a Teacher's Assistant for a computer science course, I have enjoyed the opportunity to assist students to learn how to code for the first time. This position entails teaching the students basic functions of java, assisting them in creating various projects, and debugging students' code by finding errors and helping them figure out an appropriate solution.

Holding the Teacher's Assistant position has allowed me to form personal connections with many of the students in the class. I have been able to further explain to students the amazing tasks that could be completed using the material learned in class. My goal is to encourage these students to continue to pursue technological fields.

Thank you for your time. I look forward to discussing how I can create a positive environment for students to learn at ID Tech. Please feel free to contact me at (314) 574-1253 or lucasarric@gmail.com if you have any questions.

Thank you,
Arric Lucas
